

MOBILE SCISSOR LIFT PLATFORM

The Mobile Scissor Lift Platform is an equipment designed for high-altitude operations with a wide range of uses. It is convenient and quick to move and suitable for long-distance operations.

Its scissor mechanical structure enables the lifting platform to have higher stability and a higher load-bearing capacity. It makes high-altitude operations more efficient and safer.

Mainly used for station, dock, bridge, hall, indoor and outdoor mechanical installation, equipment maintenance and building maintenance.

Also used for field high-altitude operations in petroleum, electric power, urban construction, post and telecommunications industries.

TECHNICAL PARAMETERS

Product Code	LMSL	311
Lift Rated Capacity	kg	300
Maximum Platform Height	mm	11000
Wheel Material	Solid Rubber Type	
Platform Size	mm	2010x1130
Overall Dimensions	mm	2600x1400x1700
Approximate Net Weight	kg	1360
